

PROJECT *OCEANOLOGY*

1. For at least two of the organisms you captured while seining, propose an explanation for why they were present at your seining location:

Organism 1:

Explanation:

Organism 2:

Explanation:

2. How did water chemistry and biodiversity of your location compare to the sample dataset? If you found differences, propose reasons for them here:

3. How could you test whether your explanations are correct? Describe a scientific study you could conduct to test one of the hypotheses you wrote down above:
